

# Municipality Web-Based Integrated GIS

## View Municipality Data and GIS Data Together

Municipality Web-Based GIS is a module that enables both internal and external (if desired) users to view Municipality data through an enhanced GIS interface.

### Features of the Municipality GIS:

- Layer Maintenance
- Orthographic Layer Support
- Select / Unselect Multiple Parcels
- Abutters Notices (including label print, report and map).
  - Select Multiple Parcels and run Abutters Notices from the combined perimeter of all Parcels.
  - Handle Condominium Complexes as both a single entity and individual units for Abutters Notices and Reporting.
- Click a Parcel to view a window which displays parcel information (including pictures, documents, building permits, inspections, etc.)
- Select parcels based on criteria specific to SCA databases (i.e. open permits, property class, and zoning).
- Save map in various formats.
- Extract select information to Excel/CSV
